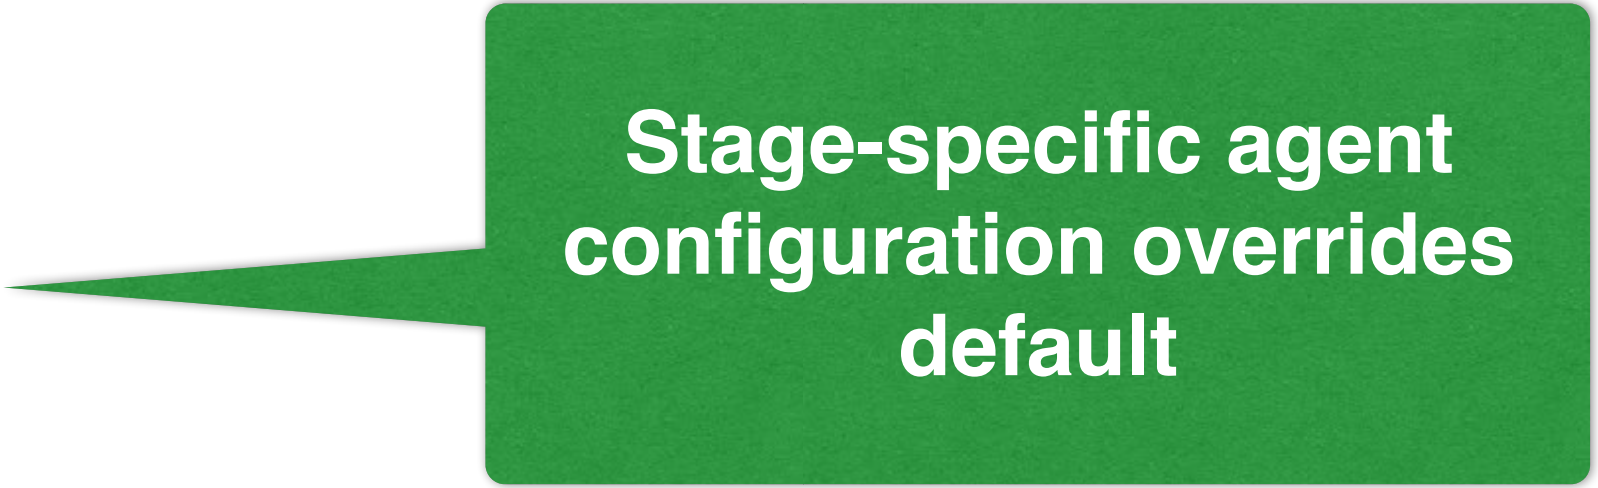
Interesting Things to Do in a Pipeline

```
stage('Build')
{
    agent
    {
       docker { image 'maven:3.5.0-jdk-8' }
    }

   steps
   {
      withMaven()
      {
         // Workaround for Jenkins issue 33510
         sh 'cd maven && mvn package -Dmaven.test.failure.ignore'
      }
   }
}
```

Dynamically provisions a Docker container to run the stage based on an image with the necessary configuration

Due to limitations in how Jenkins can interact with Docker, some workarounds may be needed



Stage-specific agent
configuration overrides
default

Maven configuration determined by Docker image
