

Common flowscripts

```
def call(String project, String stagePrefix='')
{
    def prefix = (stagePrefix.length() == 0) ? stagePrefix : "${stagePrefix} - "

    node
    {
        echo "Running common pipeline for ${project}."

        stage("${prefix}Checkout")
        {
            checkout scm
        }

        stage("${prefix}Build")
        {
            dir(project)
            {
                withMaven(maven: 'Maven 3.5.0')
                {
                    sh 'mvn package'
                }
            }
        }
    }
}
```

**Scripted pipeline syntax  
makes it possible to  
define the basic flow of a  
pipeline in a shared  
library script**
